Abstract of the Disclosure

~~Method for Producing Metallic Flat Wires or Strips with a Cube Texture~~

~~The invention relates to the field of materials science and to a method~~ Method for producing metallic flat wires or strips with a cube texture that can be used, for example, as a base for physical-chemical coatings. ~~The object of the invention is to provide a method by which the~~ The products can be produced after the last forming step in their finished width without further processing of the edges. ~~The object is attained by a method~~ includes processing wherein a material based on nickel, copper, gold, or silver is ~~processed~~ into a wire by ~~means of~~ a cold drawing method, achieving a total cross-sectional reduction $\varepsilon_g \geq 75\%$ or a logarithmic deformation $\varphi_g \geq 1.4$, and the wire is then further processed by ~~means of~~ further forming and annealing methods into a flat wire or a strip with a cube texture and having a width that can be adjusted in a defined manner.
